**MOVABLE WALLS**

## About the Company

World – class products and solutions open the door to innumerable possibilities in interiors and exteriors. We are partners with the world’s leading specialist manufactures to bring you the best in architectural design, engineering and consultancy.

As a one- stop shop, we offer you a contemporary range of doors, windows, partitions, ventilation systems, fire and security systems and other international products for your interior and exterior needs.

We believe in giving you a complete solution to aesthetically enhance your interiors and exteriors. Our teams, who are experts, are trained at our principals in Europe. They undertake a comprehensive study of design before giving you the most appropriate solution.

## About the Company

Doors & Doors started its manufacturing unit in 1995 covering 50,000 sq ft. area in Vasai. We specialize in design, manufacturing and installing Acoustic Movable Walls, Wooden Fire Doors, Wooden & Acoustic Fire Doors, Glazed doors & High End Windows in UPVC, Aluminium & Stainless Steel. We have well trained, motivated engineers and professionals who carry out high quality production of the end product on state of the art German machines. Assisted by ancillary machines for packing, lifting and transportation. All products are custom manufactured. all precision hardware, gaskets and other moving parts are imported from Europe with license to manufacture the end product. Other parts are indigenously manufactured, so as to be cost effective. This innovation has led us to be market leaders satisfying our small and large customers from all over the country.

## Experience modern design & Easy functionality — every day.

Our movable wall systems are more than just simple room partitions. They blend into your overall design concept; they add certain flair to your interiors and give you the added freedom of flexibility and functionality.

No room is too large, no ceiling too high, no measurements too challenging, no matter what your individual needs, our innovations bring your wishes alive. We innovate to let you impress.

## Don't give anything away, Least of all — space.

We, at Doors & Doors, understand that a multi-purpose room is of great value to any property. To talk about something small, to vote on something big, to present something new or to create something brand new, whatever you need from a room, the right atmosphere is key to success.

It's our business to create movable walls, which seem to just melt into the background but nevertheless still impress. That's the Doors & Doors expertise and the secret to our success.

Packing a Doors & Doors wall away is child's play. A feat which our R & D team can be particularly proud of. What's more, once away, you don't see any floor tracks or unsightly fixings. All in all, a Doors & Doors wall gives even more to your building.

## Create the space of your dreams.

Even if your wishes seem to need more room than is available to you, trust in our versatile movable wall system to achieve what you thought impossible and make your dreams come true.

Walls can have a limiting effect. That's why we customise the layout of our panels to best suit your space. Our designers 'aim is to create for you, your employees and your guests the most pleasurable atmosphere possible. Allowing you to simply enjoy being there.

## Trust your feelings.

Interior design means the synthesis of planning and design of interior spaces, which aims to make the people in the room feel as comfortable as possible.

Even though we aren't interior designers, we share that one goal — your well-being. We believe that it is our products, as part of your overall concept, which should add that, "something extra to your well-being". Something you can feel extra.

## How much freedom can you actually take?

A justifiable question, when you take a look at the seemingly limitless possibilities our HUSH range can offer you. Freedom can be confusing! That's why we invest so much time in listening to you and advising you. We design to cater exactly to your needs and wishes, to produce a result which will live up to your highest expectations. With Doors & Doors at your side, freedom knows no bounds.

# Probably the most movable wall in the world

Don't be deceived by the amazing transparency of the Premium Glass: stability and sound insulation are indeed the most important technical characteristics of our wall. You could even be forgiven for thinking it was fixed. In fact, opening and closing our Premium Glass wall is like child's play. Why not just try it yourself! A really moving combination, optimal stability and easy to use.

## Mobility, Transparency and discretion

If you don't need it, our Premium Glass movable wall withdraws discreetly. But as part of the overall design, it underlines the elegance of your rooms, which even those outside can see, if you give them a look in, looking out becomes a bore. Keep undivided attention of your guests, at the touch of a button, and our Premium Glass will leave the world outside — simply outside. As a host you need to know you can always rely on the tools of the trade. At Doors & Doors, we endeavor to develop a tool, unique in design, flexible in use and user friendly. Thus, giving you the peace of mind to get on with the job at hand- hosting.

## EASYmatic<sup>®</sup> - easy use

Making more out of the space available is not always as easy as it looks. See for yourself how our wall makes the most of your space but doesn't get in the way. Thanks to our EASYmatic<sup>®</sup> technology, the wall is both extremely safe and user-friendly, making it the perfect way to enhance your space.

CE

## Simply link up, then join up and the rest will take care of itself.

The construction of our fixtures and panels leaves nothing to be desired. The contacts in the inter-panel joints ensure that every panel is provided with power. Together with the automatic inter-panel locking system, the integrated drive units guarantee the best possible connection between the panels.

As a result every panel is perfectly aligned, and thanks to the pressure seals, has a maximum stability. So much so that it deserves to be called a wall.

The telescopic element has an internal aluminium section, which extends sideways from the panel to the wall post. It provides the correct seal pressure on the wall post.

The vertical panel edges are either veneered to match the rest of the panels so that the Aluminium profile is not visible, or protected by 8 mm aluminium returns.

Standard Panel

Telescopic Panel

Wicket Door

Standard Panel - Standard panel with top and bottom pressure seals.

Telescopic Panel - the telescopic panel closes the wall. It has top and bottom pressure seals and a retractable telescopic section on one side. It is finished the same as the rest of the panels.

Wicket Door - Wicket door panel with two vertical jambs and pressure seals.

Double Wicket Door Panel - Double wicket door panel, each with a peripheral steel frame, a vertical jamb and pressure seals. An automatic lock above the doors fastens the panels together.

Corner Panel - Corner panel with pressure seals on top and bottom.

# Perfect design —visually and technically

Double Wicket Door Panel

Corner Panel

Window Panel

Window pane I - Window panel with a glass segment with pressure seals on the top and bottom.

Fixed door panel and door Jamb pane I - Fixed door panel and door Jamb panel with pressure seals on the top and bottom and is fitted on one vertical edge with a jamb profile. The door panel is full room height and is fixed to a structural wall. 3+4+7 The standard hinges and handles are stainless steel. The door leaves have an adjustable automatic bottom seal and are automatically bolted closed when the panels are moved.

The stacking of the panels is adapted to the individual requirements. The above illustration shows only a small selection of stacking layouts.

The panels are moved with the help of the almost wear-free and silent ball bearing guide rollers.

## The Doors & Doors Premium range turns every separation into a positive experience.

We aim to position and integrate the wall into your room design to meet your needs and wishes. Even with the constraints of each room layout, when it comes to the stacking of the panels, we do our utmost to complement your room. The result is always as unique to the eyes, as it is unique in quality.

We use either a welded steel construction or adjustable threaded rods to suspend the tracks from the ceiling.

The tracks for the ceiling suspension are available in different sizes and materials to achieve the best match to your room.
